

## New Greens

2008 has been an interesting year for the Club de Golf Alcanada. In May the company Southern Golf started rebuilding the greens. By the end of the summer all 18 greens were seeded with the new grass Seaside II, Creeping Bentgrass. Since October 2008 all 18 greens are open for play.

When looking at the improvement in quality of the greens it can be said that the amount of work and the extensive cost of the operation are justified. Also the countless congratulations and the positive comments regarding the successful rebuilding of the greens are proof of the success. Come and play the new greens in Alcanada!
